## 6. Mounting the Unit

### 6-1 Mounting Condition

#### ■ 4.3"

- When mounting, be sure to have enough room between the unit, structure and part and also consider the operation temperature.
- Be sure that the ambient operating temperature and the ambient humidity are within their designated ranges.

\*1 (Ambient operating temperature indicates the temperature of both the display side and inside the cabinet.)

## 6-2 Mounting

### ■ 4.3"

- When mounting the unit, design the chassis referring to the panel opening examples and the attached outline diagrams.
- Design the chassis so that there is no distortion or twisting.

## 6-3 Panel Opening Example

### ■ 4.3"

Below is the panel opening dimension example for when applying sheets and etc. to the surface by opening the entire touch screen surface.

Design the chassis accordingly to the actual installing method.

\*Diagram from the front side of panel (panel thickness: 1.6mm or less).

- If using the design sheet key, you will need an opening for the tail matching the design sheet.
- \* To avoid damage to the design sheet key tail, do not directly come in contact with the edge of the panel opening. If damaged, it may cause a switch or the LED performance defect.
